

THE GLEICHEN CALL

VOLUME XXVIII

NO. 20

GLEICHEN, ALBERTA,

WEDNESDAY AUGUST 1, 1934

SUBSCRIPTION \$2.00 PER YEAR

BLACKFOOT COUNCIL COURT OF REVISION SET FOR AUGUST 14

The councillors of the Blackfoot Municipal District held their seventh meeting for 1934. All councillors were present when the session began at 10:30 a.m.

The minutes of the last meeting were adopted as read. The secretary was requested to order a car of lime for the municipality. It was decided to approve the application of Martial Rougeau to Public Utility Commissioners for a license to operate a fuel oil station on the south west 14-23-21. The remuneration for distributing grasshopper poison bait at points other than Gleichen was set at 50 cents per ton.

Weed Inspector Summers reported that the land on north half of 35-22-22 and the north 9-23-22 had not been summered and that the weeds were going to seed. The eradication of the weeds on these lands was left in the hands of the weed inspector. The question of weeds on the roads were fully discussed and in motions were issued that notice by way of circulars to the interested parties to destroy the weeds would be mailed at once. The progress made is chemically treating Hays Grass was also reported.

The accounts and payables as passed by the finance committee were passed and ordered paid. Councillor Umbreit reported the road north of the railway, south east 13-23-23 tapering to 50 feet at the west end. The fence has been set back with the consent of J. O. Bogatie. The secretary was instructed to go into the matter. Councillor Wheatley carried a motion that Division 4 be allowed to use \$300 of 1933 unspent allocation in addition to the allocation made in 1934.

Councillor Umbreit: That we sit at a Court of Revision at 1:30 p.m., Tuesday, August 14th, at this office, and hear complaints against 1934 annual assessment.—Carried.

Engineer Johnson and Gradinas Anglin's wages were ordered increased by 10 cents an hour. The secretary was authorized to sign at all and grease contract with the Imperial Oil Co., of behalf of the municipality. After discussion on a number of other matters concerning the municipality the meeting adjourned.

FACTORS IN GOOD JELLY MAKING

(Experimental Farms Note)

Three substances are essential to a good jelly. They are pectin, sugar and acid. Pectin is the primary jelling agent. It varies considerably in fruits both in quality and quantity. Analysis of small fruits, in the chemical laboratories of the Central Experimental Farm, has shown how readily pectin deteriorates. To retain their maximum jelling capacity these fruits should be picked when just ripe and should be used as soon as possible after picking.

Sugar plays an important part in jelly formation. Texture, flavor and yield of jelly are largely determined by the amount of sugar added. Ordinarily, the best jellies contain about 66 to 68 per cent of sugar in the finished product, but the necessary amount of sugar to be added will vary with the composition of the fruit. Too much sugar in proportion to pectin and acid is one of the most common causes of failure in jelly making. Other things being equal, a weak jelly results from the addition of too much sugar and a tough jelly from the addition of too little.

The acid content, or more correctly the active acidity of fruits is the third essential of jelly formation, if it is too high, "sweating" will occur. If it is too low the jelly will not "set". All fruits contain acid in varying amount. In general, the acid in the fruit provides sufficient active acidity for the making of good jelly, provided that sufficient pectin and sugar are present.

Investigation in the chemical laboratories has shown how important it is to obtain a proper balance between pectin, sugar and active acidity to produce the best jellies.

A combination of 0.2 per cent acid and 0.5 per cent pectin with 67 per cent sugar was found to give a very satisfactory good jelly.

News Items of Local Interest

George Walker and Lloyd Desjardins attended the O. S. A. reunion at Orla, last Friday.

The Gleichen baseball nine are playing at the Queenstown tournament today. The boys are up against a tough proposition since they have done little or no practice for the past several weeks.

How about water sports on the local lake before the swimming season is over? All kinds of events could be pulled off: besides races of various kinds, boat races, raft races, polo, baseball, diving, etc. There are kinds of stunts that could be pulled off.

One night four dogs lead by a police dog destroyed some 35 chickens belonging to J. O. Bogatie. The dogs killed the birds off the sheer joy of killing and never attempted to eat them. A neighbor heard the uproar in the early morning hours and woke up Mr. Bogatie who hurried to the scene of slaughter. The dogs upon seeing him approach beat a hasty retreat but not before he recognized them. Since then two of his dogs have entered that land where all bad dogs go.

Other towns are developing box lacrosse. How about the local sports trying to do the same?

The K. of P. lodge of Standard staged their annual picnic at the swimming hole at North Camp Sunday when some thirty caravans of people attended. They all had a great time bathing. Gleichen children who were at the pool during the day voted the Standard people great sports as they were treated time and again to ice cream and ice cold soft drinks. Even the Gleichen adults were treated to refreshments.

We have got a couple of real rascals in town and when they get into condition, their many admirers hope they will engage the town and put on real spangly costumes. One is a heavyweight and the other is in the light weight class. The show might give a most snappy exhibition of what they could do. The heavyweight won in short order when he pinned the lightweight's shoulders to the floor with a great crash. The heavyweight employed the flying

tackle with crushing force.

One or two farmers north of Gleichen started cutting barley last week. Threshing will commence very soon.

The Eastern Star and Masons are holding their picnics at the river today. A large turn out of members is expected to be on hand.

The Meadowbrook baseball squad are booked to play in Standard today. No doubt a large number of their supporters will go to the northern town to help them win.

The Rockyford baseball club played with Meadowbrook on the latter's diamond Sunday afternoon. The results were disastrous for the farm or boys Rockyford won by a very lopsided victory.

Sunday was a hot day and everybody who could make for the river and tried to keep cool. These who were unable to go to the river headed for the reservoir and jumped into cool waters.

A large number of the local Liberals are planning on taking in the Liberal convention in Strathmore next Saturday afternoon.

Angus Robertson, head of Gleichen, and superintendent of the local flour mills, is at present in Calgary receiving special medical attention. Mr. Robertson will be home shortly and we hope make improved in health.

A carload of binder twine arrived in town Friday and has been distributed around the country side. To see loads of binder twine going to the country makes one realize that harvest is just around the corner.

The dry weather of the past few weeks is taking the heart out of many a farmer.

The warm weather and dry spell is making the town gardeners irrigate night and day. The result of all this work is seen in some wonderful gardens.

Peter Kelly is the first one this year, that we have heard of to announce he had ripe tomatoes. A few days later we were informed that Mr. Eady of Eynville. Home had picked some from his garden.

They wish public affairs of the province to be conducted. This Calgary conference is an earnest attempt to learn the views of the citizens and electorate of this part of the province on all matters affecting their material welfare. If you are interested, make plans to be present and participate. You are invited regardless of political opinions or affiliations.

FATHER MacADAM FORMER GLEICHEN PRIEST MISSING

Father MacAdam, the priest who disappeared in Banff is well known in Gleichen. He was for several years in charge of St. Victor's Church here, and was very highly respected and well known. His friends here are much concerned over his disappearance. The Banff Crag and Canyon says in part:

An unyielding search continues through the forested slopes of the mountains in this district and vigilant watch of the Bow River for signs of Father A. MacAdam (7-year old son) priest of Strathmore have brought neither results nor the slightest trace of his mysterious disappearance since 10 p.m. Sunday evening.

Father MacAdam was last seen on Banff Avenue at 9:50 p.m. Sunday by his nurse, who was walking with a companion nurse. They were surprised to see him at that hour, one hour later than his usual retiring time and noticed the unusually detached pace of his walk back towards the hospital, presuming that he had some up-tasks to get himself some needful tobacco. It was found on Sunday morning that his bed had not been slept in and his glasses, pipe and watch were lying on the bedside table, suggesting that he had been preparing to retire previous to going out

ENTRIES INVITED FIELD CROPS COMPETITION

The Gleichen Agricultural Association is busy these days securing entries for the Standing Field Crops Competition. Already some eleven entrants have been secured. It is requested that all farmers who wish to get in the competition register at once either with the secretary, N. T. Pughell on Broadway, J. E. O'Connor or Mr. Frank Davy. The entry fee is \$1.00. At least 20 entries will be needed in order to hold the competition.

BREAK RECORD LAYING FOUR EGGS IN THREE DAYS

Ed Krause informs us that Mrs. Krause has an indolent canary. This canary laid an egg one day, the egg was promptly removed, the next morning there were two eggs in the nest and on the third morning there was one, which was also removed. The bird then called a halt. It had laid four eggs in three days. Shortly after this Mrs. Krause set the eggs back in the nest to be hatched. Mr. and Mrs. Krause then looked up data on how long before the young would hatch out and all available records of fourteen days. At the end of twelve days the eggs were hatched and the young birds were chirping for their breakfast and Mrs. Canary let the members of the family know about it. Mr. and Mrs. Krause kept a careful record of these events and would like to know if anybody has a bird that can beat that record.

FROM THE FILES OF GLEICHEN CALL TWENTY YEARS AGO

Thursday, July 30th, 1914.

Just as we go to press J. A. Ramsay telephones that a Winnipeg wholesale house wired him: "Wheat advanced seven cents today, equal to 35 cents per barrel on flour. Market wildly excited on account of European war. Expect further advances."

Miss Emma Jones has been visiting her home here for the past week and returns to Edmonton today, having enjoyed her holidays.

Miss Edith Jones returned last week from Vancouver, where she spent sometime visiting friends and relatives.

Mrs. C. Gaulard is visiting her parents in Edmonton.

The Strathmore-Calgary baseball aggregation put it over Gleichen boys thirteen to four last Friday.

The Gleichen baseball boys are good sports and say that a few defeats do not worry them in the least.

A good start has been made to-day starting a ladies baseball club in Gleichen.

C. A. Telford says that he will start cutting wheat tomorrow and that he has Preston wheat that he is sure will yield 50 bushels to the acre.

Mrs. Wright left on Saturday last for her home in Owen Sound, Ont. having visited her cousin, Mr. J. H. Goodenham and family for the past three months.

Work on the new Gleichen Post Office Block is being rushed to completion and in a few weeks Postmaster Ramsbottom will be occupying it.

Anderson & Neilson have made a contract to break nine quarter sections of land in the Chalmers T11 district for an American capitalist and put in a crop. The agreement provides that for the next six years they shall keep 300 acres in crop and summer fallow each quarter section every alternate year.

A. D. Batty came up from Brooks last week suffering severely from injuries he received in being caught between a stable door and the door frame just as a heavy horse struck

Refined Gasoline CRYSTAL CLEAR AND ODORLESS FOR 15c per gallon

Plus tax, F.o.b. our Gleichen Warehouse

Elimination of costly duplicate handling whereby we haul direct from the Calgary refinery, makes a big saving which is passed on to our customers in the above price per gallon.

We also have ROYALITE NAPHTHA from Turner Valley, which is the best produced from that district at 12½c per gallon plus tax

Fine Quality Gives Satisfaction

"Fresh from the Gardens"

Economic News In Fashion

Periodically, organizations throughout the country pass resolutions deprecating the treatment of certain news by the public press, but, as a rule, these are ill-advised (however fine the motive behind them) for the simple reason that the press itself is the finest barometer of public opinion. Newspapers could not survive did they not interpret aright the desires of the public to which they cater; they could not exist as profit-making institutions, were it not for the fact they keep a wary finger on the flickering pulse of the public reading public they serve. The success of a daily newspaper depends upon its ability to give the public what it wants. That is why circulation has become the criterion of success in the newspaper field.

The "wants" of the reading public vary from time to time, and policies of the newspapers must vary with them. Hence, news fashions change, as fashions in clothing change; and it is extremely diverting to study the changes as they appear in the columns of the daily press.

A week or two ago, H. R. Knickerbocker, well-known European correspondent of the Hearst organization, arrived in England to write a series of articles for Hearst newspapers on the economic recovery of Great Britain. In the course of an interview, he said:

"One of the most remarkable things that has happened to the American press since the depression started has been the public demand for economic news. Before 1929, nobody cared much, but when the slump hit America, it produced some peculiar results.

"Economic news now is considered as important as the latest sensational murder story. Whether the readers understand it or not, I don't know, but Americans have acquired a sudden curiosity to know what is happening to the rest of the world. Consequently, newspapers make a regular feature of analyses of world economic news."

Students of newspaper trends had been struck with this popularization of economic news in the United States, particularly through the writings of Walter Lippman, perhaps the most famous of all the commentators of economic events. In Canada, during the same period, a similar tendency has been remarked, the manifestations of which, perhaps, have been more abundant for reasons which are not far to seek.

Recent provincial elections in British Columbia and Saskatchewan especially, have demonstrated clearly that the public is more eager to absorb information on economic matters, more desirous of listening to economic discussion from the public platform, than ever before.

This is primarily due to the fact realization of their dependence upon world markets has been brought home to the people of the prairie west with more directness than heretofore. They have become acutely aware of the fact that anything affecting the economic condition of the English textile worker, the French vineyard laborer, the coal-miner of Scotland or Wales, sooner or later, is reflected in their own economic condition. They know now that anything which affects the purchasing power of German, Austrian, Japanese or Chinese wage-earners, must eventually have its reflex here.

World economic news, therefore, has assumed new and more impressive proportions in the eyes of the Canadian people. The vital importance of a healthy world economy has become all too obvious. Consequently, when news turns bullish, when word comes that Britain is shuffling off the coils of long internal depression, the items partake of something more than the evanescent interest of the murder mystery or the sordid sex drama.

New political movements, too, have had their genesis in economic discontent; hence it is only natural that economic discussion should attract an ever widening public. One drawback to the new fashion lies in the fact that economics, so far, has not been reduced to an exact science, whose truisms can be set forth with the precision of mathematical formulae. For that reason, it is essential that commitment to any specific theory should follow, not precede, complete study of economics, not as it has been advanced by some proponent of a particular doctrine, but as it has been advanced throughout economic history. The truth cannot be determined by study of one set of theories, but by analysis of all theories so far advanced from times preceding Adam Smith to those of latter-day Socialists. Such analysis should be made with due regard to practicality, as demonstrated in political history; not in the field of abstract alone, but in the wider field of trade and commerce, particularly during the last century and a half.

Mosquitoes Hate Yellow

Avoid This Color But Adore Navy Blue And Red

If you would be free from mosquitoes, wear yellow. They simply hate it. If, however, you would like to receive the attentions of the little blighters, just wear navy blue, which they do not. They are keen on dark red, but adore navy blue. Ochre, white and orange are passe and yellow makes them bilious. These findings, states the Canadian National Steamships, have developed from recent studies and the company recommends yellow suits and yellow towels for tropical travel where mosquitoes are liable to abound.

Successful Candidate

Consider the recent campaign in the incomparable state of Kansas, says the New York Times. One candidate for the state legislature boasted of his honorable discharge from a local madhouse. In every stump speech, he waved the documents triumphantly. "I have papers here to prove I'm not crazy," he would cry. "Can my opponent say the same?" P.S.—He got the job.

Few People Escape Attacks Of Summer Complaint

Summer Complaint may be slight, or it may be serious, but you can't tell when it seizes you how it may end. Allow the profuse diarrhoea, the vomiting and purging to continue for one day or two, and you may become weak and prostrated.

Just as soon as you feel any looseness of the bowels go at once to your drugist and get a bottle of Dr. Fowler's Extract of Wild Strawberry and check this up on natural action before the weakening looseness can get started.

Don't experiment. Get "Dr. Fowler's." It has been on the market for 88 years.

Rents Whole Hotel

Wealthiest Man In World Paying Visit To England

The richest man in the world is shortly to pay a visit to London. He is not an accidental magnate but a mighty Indian potentate, ruling over a state as large as England. He is His Highness the Nizam of Hyderabad.

This is his first visit to Europe and he will bring over an entourage of 300 people, which includes thirty-five of his wives, who enjoy the title of senior Begums. They will be strictly in purdah, so no white man can look on their faces.

A special liner has been chartered and his envoys in advance are negotiating to take over a whole London luxury hotel.

Nobody knows the extent of the colossal wealth of the Nizam. Fantastic stories are current that the entire vaults of his palace extending for nearly two miles are lined with gold and silver bullion.

He rules over the millions of his subjects with a firm autocratic hand, which is more than once invoked to the interference of the Viceroy of India. Shortly after war some point in his administration was not satisfactory to the Viceroy-party and a white political official was sent along to Hyderabad to "advise" the report. This greatly incensed the Nizam.

Then something apparently went wrong on the Indian money market. Huge wads of Indian bearer bonds were being thrown on to the market and minor panics were starting on the stock exchanges of Bombay and Calcutta.

The government tried to buy the bonds but they still continued piling in. The seller of the bonds was discovered to be the Nizam's broker.

There were heavy consultations between the Viceroy himself and the broker and afterwards with the Nizam. The stock markets ceased being flooded with bearer bonds and His Britannic Majesty's political adviser to the state of Hyderabad was called upon to undertake less disturbing duties. That little frolic set the Nizam back about ten million dollars.

His first visit to London is to "render homage" and pay his respects to King George. He will be accorded sovereign honors, such as twenty-one gun salute, a sovereign's escort, guards lining the route from the station to the hotel and one of the King's sons at the station to meet him. In the evening he will be done in the kindly scale to placate this very important potentate, for he can make himself a bigger nuisance to the "saibhs" than a dozen naked Ghandis.

Rung By Radio Signal

Admiral Byrd Flashed Signal To Liberty Bell July 4

America's foremost historical relic, the liberty bell in Independence Hall, Philadelphia, was rung by a radio signal from Admiral Byrd during the Independence Day broadcast to and from the Antarctic over the WABC-Columbia network, July 4. Special permission to ring the bell was obtained from Mayor J. Hampton Moore of Philadelphia, who spoke during the broadcast. Byrd's signal was heard at his lonely advance base 123 miles south of expedition headquarters flashed a signal to Independence Hall. Engineers of WCAU, CBS station in Philadelphia, arranged to "feed" the electrical impulse to a hammer which struck the liberty bell. Its tone was heard not only throughout the United States and Canada, but also in Little America.

Correct English

Should Take Pride In Preservation Of Purity Of Our Language

The person who speaks correctly to-day, or writes what is called "good English," is speaking or writing in the manner of Addison and Pitt and Macaulay and Gladstone and other great masters of the language. It is true new words have been created to meet new wants arising out of our evolutionary progress, and there are many technical terms in common use that Pitt wouldn't have understood. But basically pure English is third English, and we should take a decent pride in the fact in the preservation of a magnificent asset and the maintenance of a splendid tradition.—Ottawa Journal.

Must Wear Moustache

Budapest is going to have romantic moustachioed policemen. An order has been issued by the chief of police that all mounted policemen must wear moustaches. It is considered not only conducive to military appearance and bearing, but in line with the national tradition of the dashing Magyar horseman.

Colonization Finance Corporation

W. C. McKillop, Former Dean Of Manitoba Agricultural College, Appointed Farm Manager At Indian Head

T. O. Henry, General Manager, of the Colonization Finance Corporation of Canada, Limited, has announced the appointment of W. C. McKillop, former Dean of the Manitoba Agricultural College, as farm manager for the Indian Head station of the Colonization Finance Corporation succeeding O. S. Longman who has accepted an appointment of Field Crops Commissioner for the province of Alberta. Mr. McKillop is taking up his duties immediately, and brings to his new position of farm manager, a wealth of agricultural training and practical knowledge, and experience of many years as superintendent of the Dominion Experimental farm at Brandon, as well as dean of the Agricultural College.

Mr. McKillop was born on August 12, 1887, at Indian Head, Saskatchewan, of Scotch parentage, and was raised on the farm of his father who was known in Eastern Ontario as a pioneer breeder of Leicester sheep and Holstein cattle, and leader in agricultural education in country school and collegiate institute and attended the Ontario Agricultural College from 1901 to 1905, graduating with the degree B.S.A. (University of Toronto). In June, 1905, he joined the staff of the Dominion Department of Agriculture, as representative of the Seed Branch in Alberta and British Columbia where he introduced seed fairs and seed field competitions in Alberta. He started the first seed laboratory in Calgary and was instrumental in inaugurating the work of the Canadian Seed Growers' Association in Alberta. In March, 1911, he transferred from the Seed Branch to the Department of Agriculture, becoming superintendent of the Brandon Experimental Farm, his work in this position being very prominent.

Mr. McKillop was first dean of the Faculty of Agriculture and Home Economics following the inclusion of Alberta in the Dominion Department of Agriculture. With the appointment of Mr. McKillop to the Colonization Finance Corporation again has a complete corps of farm managers covering the entire Dominion of Canada, who have under their supervision approximately 1,700 farms totalling approximately 1,000,000 acres of land, the majority of which are occupied by the owners, subject to mortgage or specific lien to the west coast, operated by tenants. At the end of the present month Louis L. Lang, of Ontario, will be testing laboratory in the Colonization Finance Corporation, first vice-president of the Mutual Life Assurance Company of Canada, and president of the Lang Farming Company of Kitchener, Ontario, is expected to make his second office trip to the west coast accompanied by a number of directors of the Colonization Finance Corporation.

It is expected that as a result of Mr. Lang's trip some of the most important work will be made regarding the expansion and further operation of the Colonization Finance Corporation.

Wager With Death

Two Colorado Convicts In Test To Determine Value Of New Serum

Two Colorado convicts were confident that they had won a wager with death as a series of tests to determine the value of a new serum its discoverers hope will prevent tuberculosis.

The convicts, Carl Erickson and Mike Schmidt, said they had gained weight and had in good health although they have taken several doses of the serum and live tuberculosis bacilli have been injected into their blood.

The life time injections were told the United Air Lines opened office in Denver, but they were not entered to become subjects of experiments after Governor Ed. C. Johnson promised them pardon if they survived.

Russia Imports Wheat

Millions Of Bushels, It Is Claimed, Are Being Sent To Vladivostok

Millions of bushels of wheat, an authoritative source disclosed, are being imported into Vladivostok because of large increase in Russian army manpower in eastern Siberia due to tension between Japan and Russia.

More than 3,000,000 bushels will be imported this year, this source disclosed, almost entirely for the purpose of feeding an increased Russian military establishment.

Despite lack of official statistics from the Soviet Union, it was learned that imports at Vladivostok, once an important Russian terminal for Russian wheat exports, gradually have been increasing during the past six years.

New Air Service

Direct air passenger express service between Seattle and British Columbia became effective July 1 when the United Air Lines opened operation into Vancouver. Extension of the Pacific coast airway will place the Canadian and Mexican borders only 12½ hours apart.

Agricultural Notes

Many Items Of Interest To The Western Farmer

Sudan grass is being grown more extensively this year for pasture purposes in the 88 Lawrence counties of Eastern Ontario.

Commercial canning is one of the oldest of the larger organized industries in the Dominion. The first factory was established at Grimby, Ontario, in 1878.

Seed cleaning operators in British Columbia state that, owing to the general low viability of the timothy seed cleaned this year, much more seed was blown out in cleaning than in previous years, in order to improve the germination.

A saving of thousands of dollars in preparing grasshopper mixtures in Alberta has been effected by the pulverization of the sawdust used, on the recommendations of the Dominion Seed Branch inspectors, thereby resulting in the use of only 20 per cent. of bran instead of 50 per cent. as formerly.

Under the amended regulations of the Dairy Industries Act, a dairy produce grader may refuse to grade any cheese or butter which in his judgment is of either too high a temperature or too low a temperature to permit proper examination, until the temperature of said cheese or butter is brought within a satisfactory range.

The sale of commercial fertilizers in Saskatchewan has been considerably higher than last year, some 1,200 tons of superphosphate and 100 tons of triple superphosphate having been sold. Most of the fertilizer went into the territory east and north of Regina and north of the Saskatoon-Macklin line. Fertilizer sales in Quebec are estimated at 25,000 tons for the last year.

Owing to dryness, seed prospects in Quebec, as at May 31, were not promising, especially for timothy and clover. Farmers, however, had planned to increase their seed production considerably, and a circular was sent to prospective growers acquainting them with the services available to them from the inspectors of the Seed Branch of the Dominion Department of Agriculture.

By the discovery of the late Sir Ronald Ross of the relationship between the mosquito and the spread of malaria, eventuating in a similar discovery regarding yellow fever, not only saved millions of human lives but enabled millions of acres of potentially fertile land in tropical and subtropical areas of the world to be placed under economic crops. Previously these lands were death-traps to all who attempted to cultivate them or live upon them.

During the ten months ended May, 1934, the amount of wheat exported from Canada was 538,928,849 bushels. Of this 265,795,894 bushels went to Empire countries—Ireland, Free State, New Zealand, Malta, other dependencies, and the United Kingdom, the last named alone taking 33,662,081 bushels. The total amount of wheat exported to foreign countries was 43,062,555 bushels. In the order of the amount imported, these countries were Holland, Belgium, France, Germany, Italy, Japan, Norway, Denmark, Sweden, China, Peru, Bolivia, Brazil, the United States, and other small shipments abroad.

Imports of Canadian barley into the Netherlands reached their peak in 1929 when they totalled 142,772 metric tons, or over 61 per cent. of the total. In 1930 the imports fell to 11,881 tons, but in 1931 went up again to 105,630 tons. In 1932 the quantity imported was 77,068, and in 1933 there were no imports of consequence. Since the beginning of 1934 there have been no imports of barley from Canada. Despite its absence from this market for a year and a half, Canadian barley is well liked in Holland and some consumers still ask for it although the price is too high to make business possible, says the Canadian Trade Commissioner in Holland.

Built Fireproof Nest

A pigeon nesting in the courtyard of the federal building at Denver, Colorado, was apparently influenced by ideas of fireproof construction used in the structure. Despite an abundance of twigs and shrapnel it made its nest entirely of wire paper clips. J. M. Lee, janitor, who discovered the nest, reported that there were two eggs in it.

Stitched Heart Works

The medical profession, keenly interested, kept touch by telephone as George Hampton, 41, continued to improve after an operation in a Lancaster, Pa., hospital, in which his heart was lifted from its place, stitched to close a stab wound, and replaced.

Always ready—Inexpensive
Ample PAPER PRODUCTS
HAMILTON, ONTARIO

New X-Ray Device

Possible For Doctors Miles Away To Examine Patient

A new X-ray observation device, revealing the anatomy of the least substantial body organs and even the blood vessels in their natural color, has been perfected and patented by Luther G. Simjian, former director of the photographic department of the Yale Medical School, it has been announced.

Mr. Simjian's apparatus not only will show the structure and density of barely opaque parts that appear on present X-ray plates as dim shadowy forms, but lessens existing hazards to the subject being examined. Moreover, by a system of telegraphic wiring between hospitals, it will be possible for a patient to sit before an X-ray tube in one clinic while the image of his internal organs is reproduced for specialists in another clinic hundreds of miles away, or in any number of clinics at the same time.

Superficially, Mr. Simjian's invention resembles the familiar X-ray fluorescent screen which reflects the sharp shadow thrown by the subject as he sits between the source of the rays and the screen. In this shadow, dense objects, such as bones, appear almost black, while tissues of less weight fade into lighter tints of gray. Invariably the diagnosis must indulge in guesswork as he strains to distinguish faint lines of shading.

When the physician desires to peer further into the secrets of a particular organ, such as the heart, he must increase the intensity of the X-rays.

Likes Canadian Way

American Business Man Found Life Tranquil And Enjoyable

A well-to-do American, disliking the heat and humidity of the United States, sold his business, paid a long visit to Canada, and has returned home in a mood to migrate to the Dominion.

He declares that he found life there calm, tranquil, enjoyable.

In Canada he read of no kidnappings.

The people did not grasp their newspapers excitedly every morning, fearful lest the lawmakers had hatched some new and harassing legislative innovation.

The whole atmosphere breathed stability. Few Canadians were affected by the jitters, few talked nervously.—Forbes Magazine.

FALSE TEETH

Dr. WERNER'S POWDER

Sold the world over—Dr. Werner's Powder—justly called "the perfect powder"—holds false plates firmer for hours longer. Leaves no sickening gummy paste—teeth fit so snugly yet comfortably they feel like natural ones. Prescribed by world-famous dentists—just sprinkle on. Inexpensive—any drugstore.

Strange Things In The Mail

Postmen Have To Deal With Some Extraordinary Parcels

Fortunately for them postmen do not always realize the value of their packages or the danger that sometimes lies in them. If they did most of them would need a rest cure every year. Recently a London postman delivered the world's fourth largest diamond to a firm in Charterhouse street in the city of London.

The gem had been bought by Sir Ernest Oppenheimer, and was worth \$350,000 of anyone's money. No precautions, however, were taken to ensure its safe delivery other than registration. It was packed in a brown cardboard box, and had it been lost in transit the owner would, according to British Post Office regulations, have been able to claim no more than a paltry five pounds. Nevertheless, the jewel was delivered safely, and the man to whose care it was entrusted was an unnamed postman earning under 14 a week.

Queer things than valuable stones have been sent by post, thought, of course, the Post Office laws state explicitly that all articles lying in any way to embarrass their delivery officers must on no account be sent through the post. But, needless to say, this rule is frequently broken through ignorance or disregard, and the post is often misused by scoundrels for their own nefarious end.

Even in such a peaceful and harmless country as England would-be assassins have been known to send bombs through the post to public men whom they have wished to kill; not the crudely constructed bomb which is thrown in the street, but a diabolical contraption so cleverly made that it explodes the moment the package is opened. The Post Office has a special department which deals with packages addressed to famous people whom they suspect to be in danger of assassination, and such parcels are opened by expert hands.

One of the most ghastly objects ever received through the post was an ear—a human ear. It was sent to a very wealthy Englishman who refused to be blackmailed by crooks as a reminder of what would happen to him if he did not pay. But he remained chaste and called in the police, which, as it turned out, was by far the wisest course.

During the Great War, Sidney Reilly, the famous spy, made good use of the post. On one of these occasions he sent himself valuable plans of fortifications in an open envelope, such as circulars are sent in. And those who followed his movements did not think it worth while examining the contents with response. Often the plans were of incalculable worth, but it worked.

Ancient Coal Tong

An iron coal tong, thought to be the one used 200 years ago by David Zeisberger, founder of Schoonbrunn first white village in Ohio, near Philadelphia—was found recently by Harry Clever, pilot at a Schoonbrunn flying field, when workmen were grading the ground.

Burning Royal Portraits

Signed royal portraits in the possession of the late Rev. E. S. Baugh, who had been rector of St. Anne's church, Soho, are to be burned, according to the terms of the will, and a marble statue of Queen Alexandra is bequeathed to the King.

Chemical actions are more rapid in warm humid regions than in places that are very dry or cold.

"Blue" Spells

Reduce some women to the pensive shadow of their own smiling selves. Others take the Vegetable Compound when they feel the "blues" coming on. It steadies quivering nerves—helps to tone up the general health—gives them more pep—more charm.

LYDIA E. PINKHAM'S VEGETABLE COMPOUND

The Greatest Attraction

Hall of Science Taken First Place At Chicago Fair

Visitors to A Century of Progress seek instruction first and amusement second, attendance records indicate.

The story of last year is being repeated as hundreds of thousands swarm to the numerous educational exhibits, and the Hall of Science, which last year held the attendance record, again is one of the favorite places for the throngs who pass through the various entrance gates to the exposition grounds.

One might suppose the younger visitors would be more interested in the scores of amusement places to be found within the grounds, but such is not the case, fair officials point out.

For example, on Children's Day this year, when nearly half a million youngsters thronged to the fair, the Hall of Science was a chief attraction. Thousands of them jammed the hall throughout the day, and attendances have been enlarged, and a new show dedicated to the "fallacy of perpetual motion" has been added. The comic ray show also is a popular feature.

The Illinois house, home of the Lincoln birthplace, is crowded at all hours. Attendees will versed in the life of Lincoln are on hand to answer the hundreds of questions put to them by the visitors.

Buildings devoted to agricultural display, horticulture, and industry also are popular places for the seeking information. Most of these exhibits have been greatly enlarged since last year.

Hard Question Raised

In Austrian Courts

What Does Life Sentence Less Ten Months Mean

A legal question has been raised in the Austrian courts that perhaps will never be answered. It is: How many years does a man have to serve in prison if he is sentenced for life minus 10 months? The question arose out of the case of Stefan Radert of Kitzsee, who committed a murder 10 months ago. He was found guilty by the court and sentenced to life imprisonment, but his lawyer, Hans Anton Kraus, appealed to a higher court declaring that under Austrian jurisprudence every defendant is entitled to the benefit of the time he served while awaiting trial, in this case 10 months. The Appeals Court ruled that Radert is to serve a life term minus 10 months he spent in jail awaiting trial. After this ruling, Anton Kraus is more perplexed than ever, for how is his client to know the date of his death 10 months in the future when he can get released from prison in time.

Lost Typewriter Returned

English Journalist Has Word Of Praise For Russian Police

Wastever also has found to criticize in Russia, Carl Ketchum, English journalist, has a good word to say for the Russian police. A portable typewriter stolen from him on a Black Sea steamer was returned in 10 days after he lodged a claim with the travel agency at Moscow, a few thousand miles away.

He had been warned about thefts from trains, he said in an interview at Calgary. Posing as porters, unscrupulous gentlemen had a habit of reaching into trains at station platforms and lifting off with a hooked walking stick anything like baggage that could be easily carried off.

But when his typewriter was stolen he remembered the travel agency's promise to return anything. The police broadcast the serial number of the machine and soon picked it up in a government store where it had been brought for disposal, and it was returned to the owner.

During May 310,245 hogs were graded in Canada. For the first five months of this year, the number graded was 1,102,304 as against 1,410,616 in the corresponding months of last year.

Advices from Washington state that apple prospects are unusually poor in all the States, due to winter injury, late frosts, and lack of moisture.

There are five quadrillion tons of air in the world.

THE GLEICHEN CALL, GLEICHEN, ALBERTA

Exploration Plans Laid

Byrd Will Use 'Planes, Tractors And Sleds In Antarctic

Aeroplanes, tractors and dog sleds are to take part in a series of sallies into the antarctic vastnesses within a few months by Admiral Richard Byrd's south polar expedition.

The broad outline for geographical exploration and scientific research during the coming spring and summer was laid down by Byrd, included on with the aid of a small airplane, sent up 1,500 feet to determine the nature of the upper air currents.

Considerable exploration will be made in the eastern or pacific quadrant. Admiral Byrd already has made some attempts to learn more about this vast uncharted area, both by ship and plane.

A fresh survey will be made of the bay of whales to determine whether or not there has been any movement of the ice barrier. Meteorological observations will be carried on with the aid of a small airplane, sent up 1,500 feet to determine the nature of the upper air currents.

Hues Of Human Skin

Scientists Obtain Valuable Data By Use Of Tongs

By glancing paper test-tubes such as children use in games, scientists obtain valuable data with respect to the hues of the human skin. "This new method," says Doctor Clark Wissler, Curator-in-Chief of the Department of Anthropology of the American Museum of Natural History, "is the most accurate device yet invented for judging the color of the skin. The paper disk sectors, each of which carries a color found in varying degrees in the human skin; red, which is chiefly due to the blood beneath; white, or the hue of the skin without pigment; black pigment and yellow pigment. By indicating the proper proportions of each on the top, when it is in motion the colors will combine. In this way we can gauge the amount of each hue in any skin." The average "white" skin, according to Doctor Wissler, contains 32 per cent. red, 15 per cent. yellow, 15 per cent. red and 38 per cent. white. The skin of the Negro contains 70 per cent. black, six per cent. yellow, 20 per cent. red and four per cent. white.

Just A Fek Questions

Matter Of Paying War Debts Has Many Angles

Yes, Europe "hired the money, didn't they." But Americans, before asking Europe to pay up, should ask themselves whether they want Europe to pay. And before that they should ask themselves whether they are allowing the terms of their good business sense to decide their answer. And before that they should ask themselves whether America needs more money, or whether it needs more work to offer its citizens; whether it needs more goods (payment in kind) or more cash to sell its already abundant goods. And before that they should ask themselves whether a debtor can be expected to buy more goods while he is paying up old debts.—Christian Science Monitor.

Sixty per cent. of the revenue of Japan was received by the Japanese army and navy in 1933.

Canada Benefits By World's Greatest Shipping Merger

Canard White Star Limited Will Maintain Frequent and Regular Sailings to England, Scotland, Ireland and Continental Ports.

Canadians are fortunate in possessing the most beautiful seaway to Europe. The magnificent river journey from Montreal to the sea, which shortens the actual ocean voyage by days, has been a feature of Canard and White Star publicity for many years and has done a tremendous service for Canada in making the greatest wealth and beauty of this Dominion known to the world.

Canada's destiny as a great nation is evident, and the record of these companies would indicate that Canard White Star Limited will march forward with the strength of the complete confidence which it enjoys today.

This unique experience gained in the remaining days of sailing ships, broadened by the less romantic but more practical development of steel ships and steam engines, has reached its culmination in the gradual but wonderful evolution of the huge, magnificent luxury liners carrying the house flags of the Canard and White Star lines to-day.

Who can bear the names of the Mauretania, the Berengaria, the Aquitania mentioned and fall to place them among the "immortals" of the Canard Line, founded in 1840 by Samuel Canard of Halifax and dedicated to the service of humanity and Canada? Or could one fail to respond to the appeal of the Olympic, the Majestic, the Britannia, White Star ships so widely known on the seven seas?

For so long have the ports of the west welcomed Canard and White Star ships; for so many millions of travellers have they provided a "new" taste of life afloat, is it to be wondered at that these ships bear names to confound with, and that their services have become a tradition for all that is best and most worthy?

The history of Canada is inseparably woven with the history of Canard. It was due to the vision and courage of a Canadian, Samuel Canard, that a regular mail and passenger service was made possible between Great Britain and Canada; that steamships supplanted sail on the North Atlantic. It was his drive force and genius that built the S.S. Britannia and sent her off from Liverpool on July 4th, 1840, bound for Great Britain, the first assignment of Her Majesty's Royal Mail, and he guaranteed that thereafter all Great Britain and Canada were conveyed regularly winter and summer by the steamships of his line. That service has been so completely successful was due to Samuel Canard's organizing genius for the tiny paddle-wheeler Britannia of 1,150 gross tons made the voyage in thirteen and one-half days. And now, a ship built for the Canard White Star Limited the largest and most magnificent ship in history; No. 534 of 73,000 tons and more than 1,900 feet long; a dream ship that even Samuel Canard could never have imagined.

Trucks followed the house flags of Canard and White Star, and Canadian wheat producers, farmers and manufacturers have found for their products a solid place in the markets of the world, aided in their quest by the shipping facilities provided so generously, regularly and regularly by these companies.

The growth of Canada and the increasing affluence of her people have been met by continuously improved service given by both Canard and White Star. Always pioneers, these companies for the Canadian trade have invariably embodied the newest developments in steamship construction and have provided the greatest possible degree of luxurious comfort, beauty, seaworthiness and steadiness, and so

Has Queer Occupation

Man In England Sells Bees' Stings For Rheumatism

Britain's queerest salesman is George Aloysius Storey. He peddles pain.

All spring and summer he wanders through the small villages and hamlets, carrying on his back a large black box which emits a loud buzzing.

The box contains bees, whose main duty is to sting his rheumatic clients. Sixpence a sting is the price charged, and he finds plenty of people willing to offer an arm or leg to a bad-tempered bee.

A reporter found Mr. Storey walking along a road between Swinford and Catherpo, in Leicestershire. His box hummed rhythmically to his stride.

"The faith in bee-stings as a remedy for rheumatism and neuritis is unshaken among most of Britain's villagers," he said. "I have only to arrive in the smallest hamlet to find plenty of customers."

He prepares a small place on the victim's arm or leg with antiseptic, and place the bee in a tiny wire cage on the spot. Then I tickle the bee with a straw till it begins to buzz angrily, and stings in the self-defence. Naturally, as bees will keep renewing my stock of bees, and I get these from my brother-in-law, who has hives near Durham."

THE RHYMING OPTIMIST

By Aline Michaelis

THREE A.M.

The waning moon from tilted cup Spills nectar, rising now; And macking bird, by that white wing Is stirred like wind-tossed bough.

O, wild and strange his poignant notes On the night embark, A spray of liquid silver sound To shine against the dark.

Far moon, so passionless, so cold, How can you rays inspire Such singing melodies of pain, Such mounting love and fire?

The waning moon looks down where Earth's heart is torn and sore, While heedless, locked in sleep; But her one worshiper slings still Across the night, the deep.

Always Grumbling

A farmer, who was in the habit of grumbling about most things, was heard to say that his potatoes were very big that year. "Well," said his neighbor, "I'm glad you are pleased with the size of your potatoes." "Yes," said the farmer; "but what shall I do without the small ones for the pigs?"

Little Helps For This Week

"It is good for me that I have been afflicted, that I might learn Thy statutes." Psalm 119:71.

And yet these days of dreariness Are sent us from above, They do not come in anger But in faithfulness and love; They come to teach us lessons Which bright ones could not yield, And to leave us blest and thankful, When their purpose is fulfilled.

Why should I rebel at the proving of my Lord that maketh deep furrows on my soul. I know He is no idle husbandman. He prepareth a crop.—S. Rutherford.

Heed not distressing thoughts when they rise ever so strongly, even though they have entered your mind fear them not, but be still awhile and do not believe the power you feel they have over you, and they will fall all of a sudden. It is good to: your spirit, and greatly to your advantage, to be much and variously exercised by the Lord. You do not know what He has already done, and what He is yet doing for you therein.—I. Fenington.

What Scotsman Wastes

One Thing He Does Not Save On

What is the only thing that Scotsmen ever waste? According to Mr. Chorlton, president of the Institution of Mechanical Engineers, the answer is water: Figures of water consumption in the British Isles, which Mr. Chorlton quoted at a recent Public Works Congress, show that Dunblane, in Perthshire, uses, on an average, 130 gallons of water a day per head of population. This is "top score," but Irvine, in Ayrshire, uses 61½ gallons, Bridge of Allan, 85½ gallons, and Paisley 81 gallons all get through a great deal more water than London, where the Metropolitan Water Board's figure is just under 50 gallons per head. And there are places in England where only twelve and fifteen gallons are used.

Proved His Identity

Dog Lost For Five Years Does Tricks For Master

The saying that "elephants never forget" seems to apply equally well to dogs at least as far as "Prince," collie dog owned by a man in Quincy, Mass., is concerned.

"Prince" disappeared from home five years ago. He returned the other day to the Nunally home, scratched on the door for admittance, and just to prove his identity beyond a doubt, performed a series of tricks which his master had taught him when a puppy.

Newfoundland supplied the United States with \$500,000 worth of blueberries in the last six years.

Perhaps the greatest personal tragedy is to be able to do a thing pretty well but not very well.

Mrs. Secretary of The Treasury

Now a days it is becoming more and more the practice, particularly among the younger people, to regulate expenditure of income by the budget system. To the wife is delegated the task of keeping the family expenses within set limits—she is the real secretary of the family treasury. She must count the pennies and stretch them to their utmost buying power.

The modern woman knows how to make a dollar purchase one hundred cents' worth of value. She reads the advertisements in her newspaper and notes what is being advertised that she needs. She scans them closely to know what is newest and best in clothes, in foods, in utilities that will make the home work easier, the little luxuries that will make it more comfortable. Yet her purchases are regulated by the budget—advertising helps her to keep within bounds.

Such is the value of advertising to the woman in the home. It is her faithful adviser, ever ready to tell her what, when and where to buy and how much to pay.

The Gleichen
Call

Town & District

James Greer was a visitor to town Sunday and Monday. Mr. Greer is now located at Iricana.

Mr. and Mrs. John Boyd and family have returned from visiting relatives at the coast.

Fishing was the prince of sports last week and was conducive of some very fishy stories.

Joe Guttman and his daughter Jeanette are at present spending a short holiday at Banff.

Rev. Mr. Davies and Mrs. Davies were visitors to town from Aceme on Saturday. Mrs. Palmer accompanied them back for a holiday.

Mrs. W. W. Brown of Lethbridge, arrived in town last Thursday and is spending a short time visiting friends here.

Wm. Schmidt has improved the appearance of his service station with a coat of paint. This gives his place of business a most up to date appearance. Now if a few more of our fellow citizens would go and do likewise, how our town would improve.

John McLeod, an inmate of Eventide Home died in the institution last week at the age of 81 years. He entered the home over seven years ago, coming here from Winnifed, Alta. The funeral took place to Eventide cemetery with Adj. Sutherland officiating.

Miss Catharine Campbell of Cadwath, Sask. and Mr. and Mrs. John A. Hincks and family spent a few days in town visiting their cousin Mrs. Felix Desjarine.

Mr. and Mrs. W. A. Cook announce the marriage of their second daughter, Jean, to Mr. John Deporter, which took place on July 17th in Portland, Oregon. Mrs. Deporter will visit her parents for a short time, after which she will return to Portland to take up residence there.

There are a large number of Manitoba and Saskatchewan cars going through Gleichen every day. So many cars are moving that it is very noticeable and a lot of the cars are new ones too. Evidently conditions are much better in the eastern provinces this year than they have been for the past several years.

Last year and the year before the old timers of the district held picnics at the Cluny bridge. So far this year there has been no talk of having a picnic. Mr. Griesback and "Brownie" might look into the matter and see what can be done.

The Blue Bird Sunday School class of the United Church spent a couple of days last week camping at the river in charge of Mrs. G. W. Evans.

A meeting of the Liberals of the town and district are at present camping on the banks of the Bow River where they are spending their holidays. Camping on the river banks is getting to be very popular and each year sees more Gleichen people spending a week or so there.

HELP BRIGHT STUDENTS

It is to the credit of philanthropic rich men that they have given generously of their wealth for college endowments. But in view of the overcrowding of endowed institutions by alleged students who only go to college for the sake of being known as "college men," it is pertinent to ask whether some restrictions should not be placed upon these bequests. That any young person not possessing the natural qualifications or character to make proper use of a college course should crowd out an earnest and qualified student is shameful. That any who possess the mental and moral capacity for using higher education for the advancement of mankind should be denied it is a tragedy.

Some of the millions which are donated for the general use of colleges might be put to better use by devoting them to the establishment of more scholarships, including living expenses for talented boys and girls who are unable to secure higher education without such aid.
